SUMMARY

Systems Engineer and Full Stack Developer focused on high-performance infrastructure, CLI tooling, and Unix-based systems. Expert in bridging high-level application logic (Python, TypeScript) with low-level systems programming (Rust/C++) to build scalable, production-grade software.

EDUCATION

Broward College Fort Lauderdale, FL
A.A. / A.S. in Computer Science (in progress) | Aspiring University of Florida Transfer *Expected 2027*

TECHNICAL SKILLS

Languages: C++, Rust, Python, TypeScript, JavaScript (ES6+), SQL, Shell Scripting

Trading & Systems: Interactive Brokers API, Order Routing, Market Data Streaming, WebSockets

Development: Linux/Unix, CLI Tooling, GNOME Extensions, Docker, Git, CI/CD, Makefile, Turborepo

Web & Backend: Node.js, Actix, PostgreSQL, SQLite, Next.js, RESTful APIs, System Design, Tokio, Ratatui, Plotters, SQLx

PROJECTS & EXPERIENCE

Rustiq (RSTQ) | Rust, Tokio, Ratatui, SQLx 2026 – Present

- Engineered an asynchronous data pipeline using Tokio and Request for low-latency market data ingestion.
- Improved performance optimization and reliability of caching systems by 25% through SQLx and SQLite data modeling.
- Developed and maintained high-quality, scalable terminal interfaces (TUI) using Ratatui and Plotters.

Algo Trading CLI | TypeScript, Node.js, Rust 2023 – Present

- Architected a command-line interface for automated trade settlement and decentralized portfolio management.
- Improved performance and reliability of trading systems by 20% through optimization and caching strategies.

Gridnews | TypeScript, Next.js, Node.js, PostgreSQL, Rust 2024 – Present

- Designed a scalable news aggregation platform using a grid-based UI and a high-concurrency Rust backend.
- Developed and maintained high-quality, scalable backend services using TypeScript, Node.js, and PostgreSQL.
- Improved system scalability by 40% through efficient resource allocation and containerized Docker environments.

OPEN SOURCE & ACHIEVEMENTS

Stoqey/IBKR (Contributor) | TypeScript 2025

- Authored comprehensive technical documentation for order configuration, clarifying Interactive Brokers API integrations for institutional-grade routing.
- Improved developer experience by standardizing code snippets and detailing critical execution parameters including Time-in-Force (TIF) and After-Hours trading (outsideRth).

public-apis/public-apis (Contributor) 2026

- Added the GridNews API to the curated list of free public APIs to promote open financial data.

vinegarhq/sober (Contributor) 2026

- Troubleshoot and documented Linux Vulkan-specific crashes on NVIDIA driver setups for a Roblox runtime.
- Collaborated with cross-functional open-source teams to identify and prioritize technical debt.

gorilla-devs/ferium (Contributor) | Rust 2024

- Participated in open-source discussions, issue reporting, and tracking for the CLI Minecraft mod manager written in Rust.
- Improved code quality and reduced bugs through active feedback and issue tracking.
